

Hobnet – IoT6 joint presentation

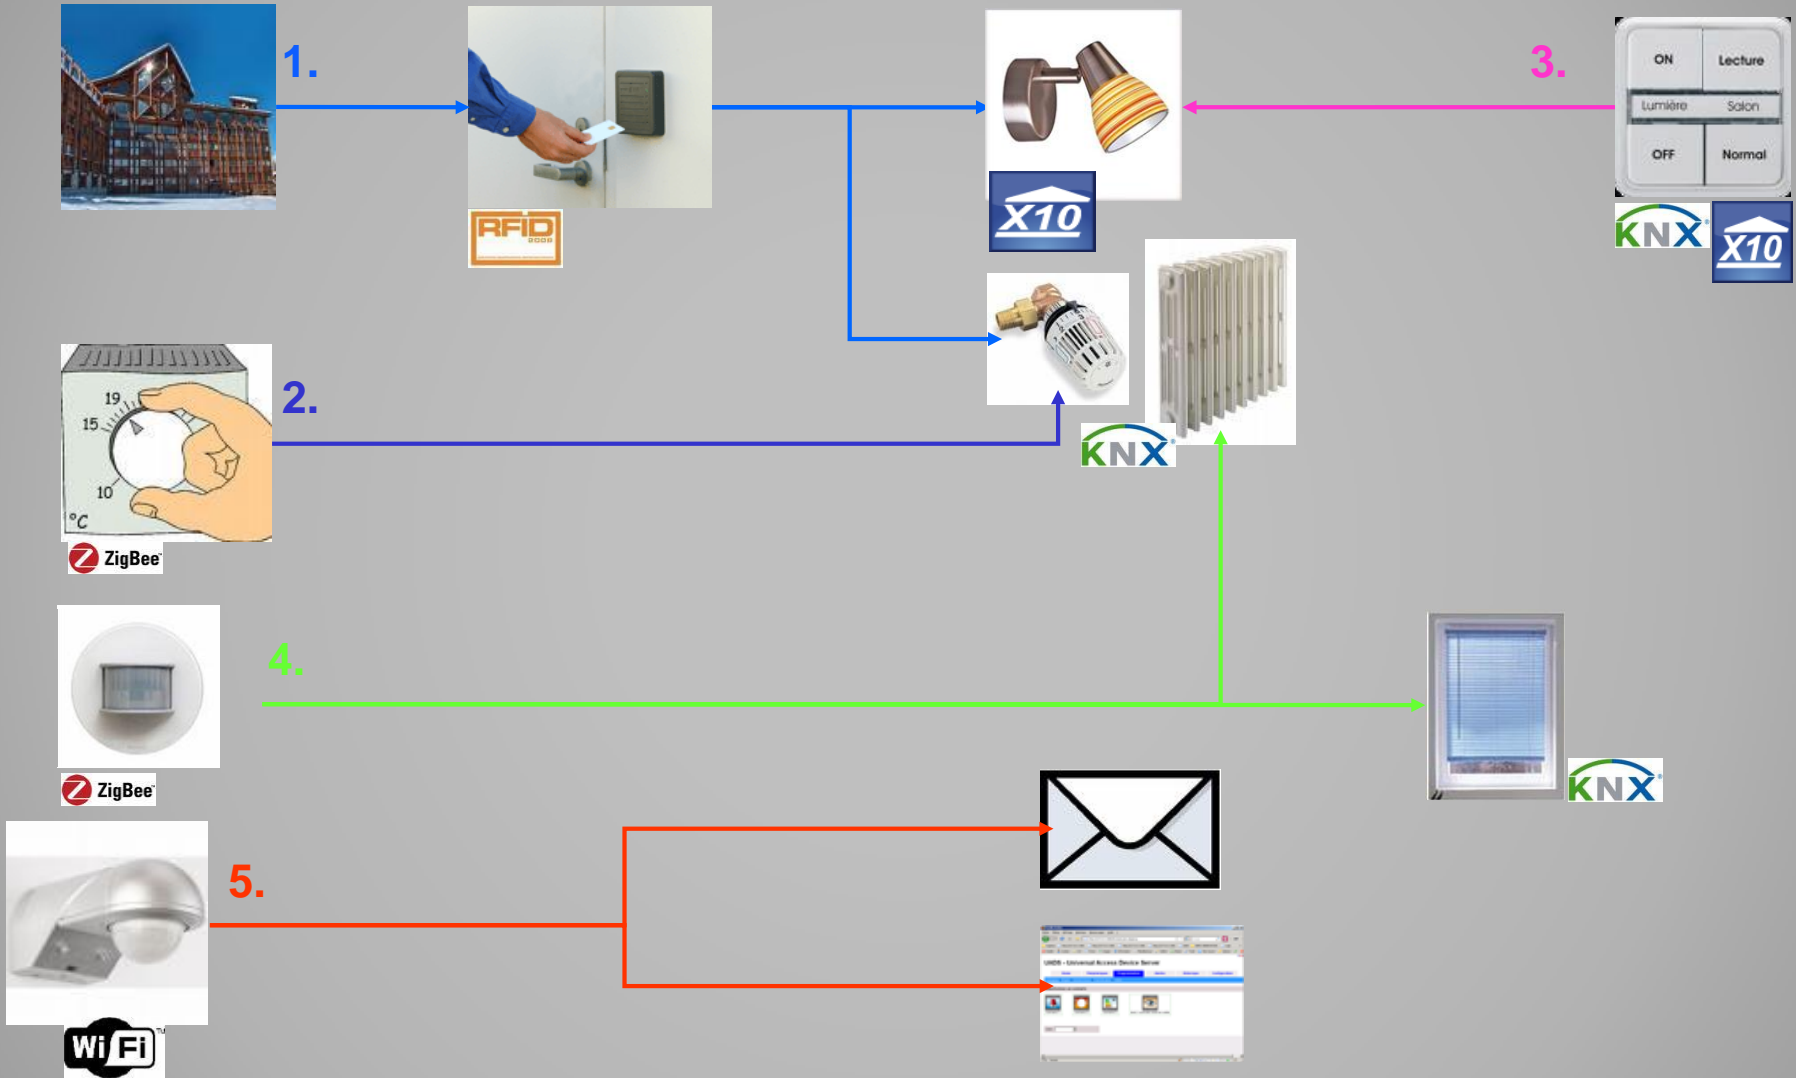

Venice – 18.6.2012

Dominique Genoud - HESSO//Valais Switzerland
University of Applied Sciences

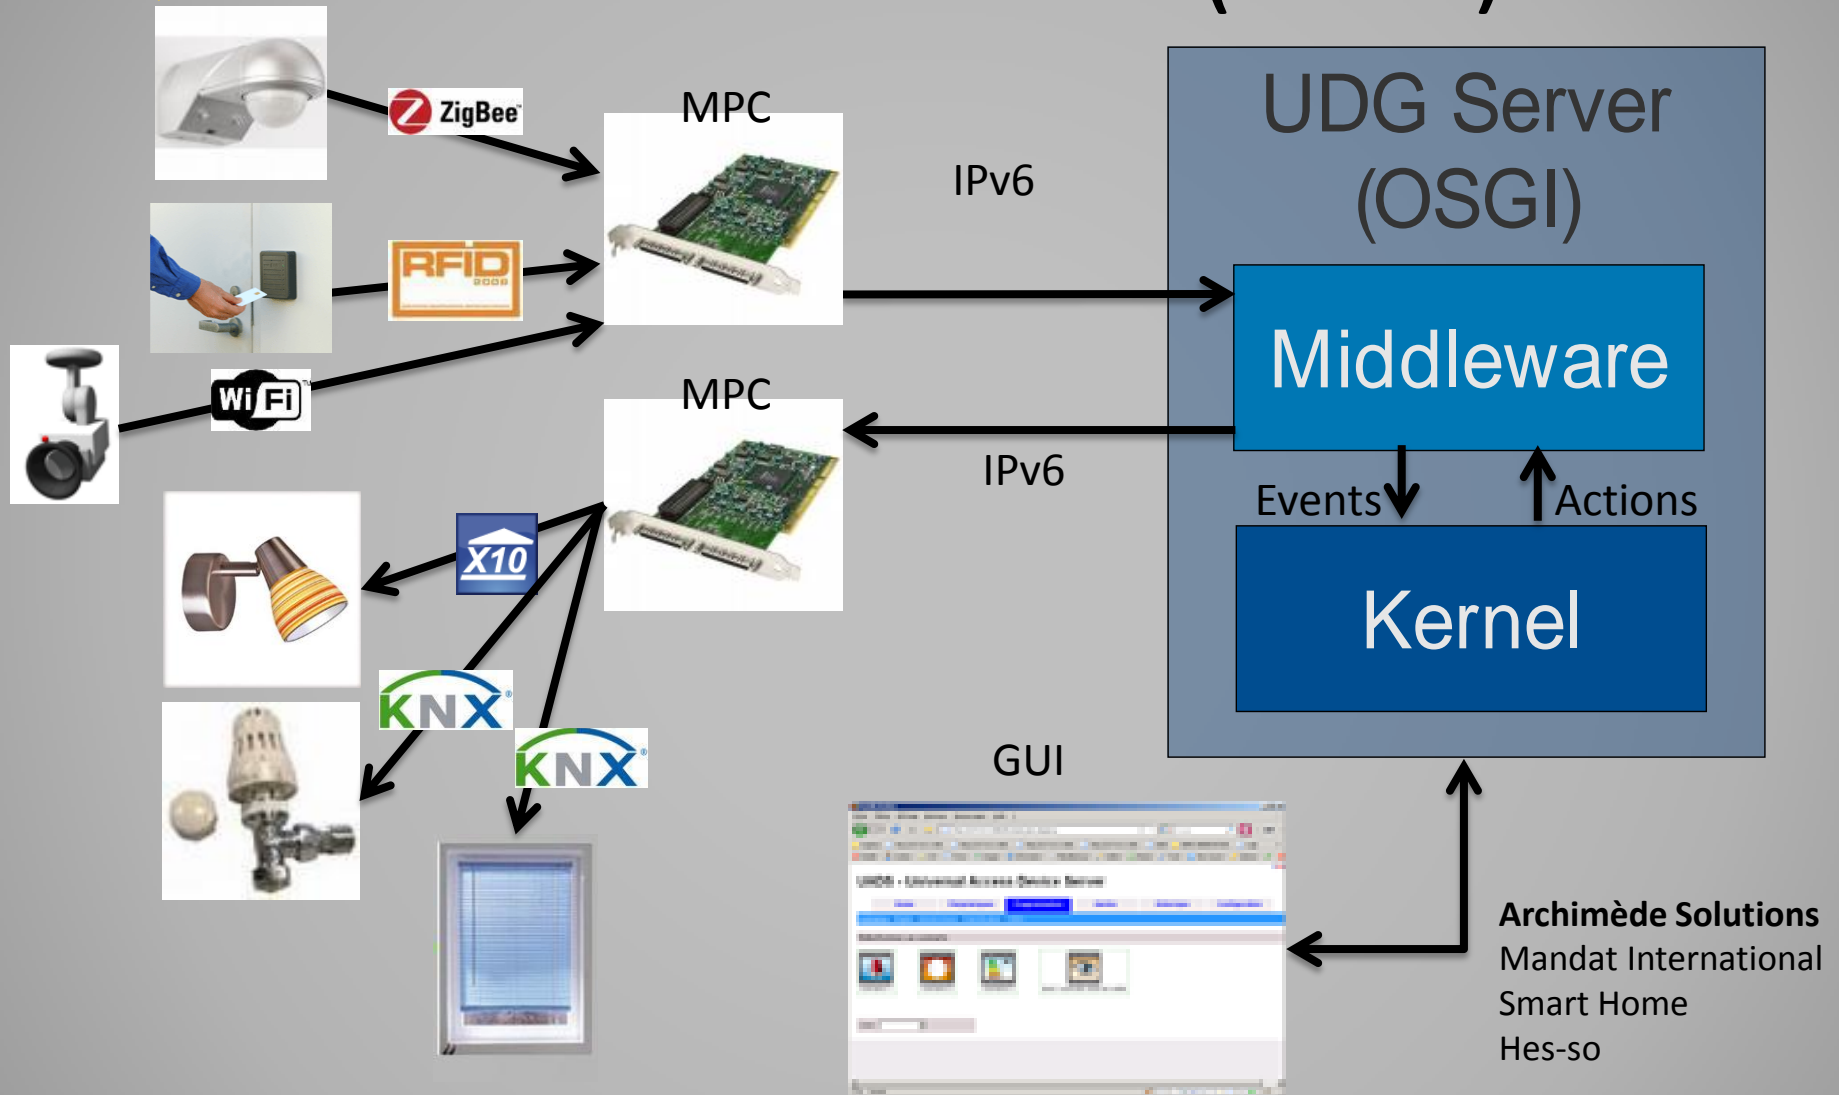

Buildings : multiple protocols

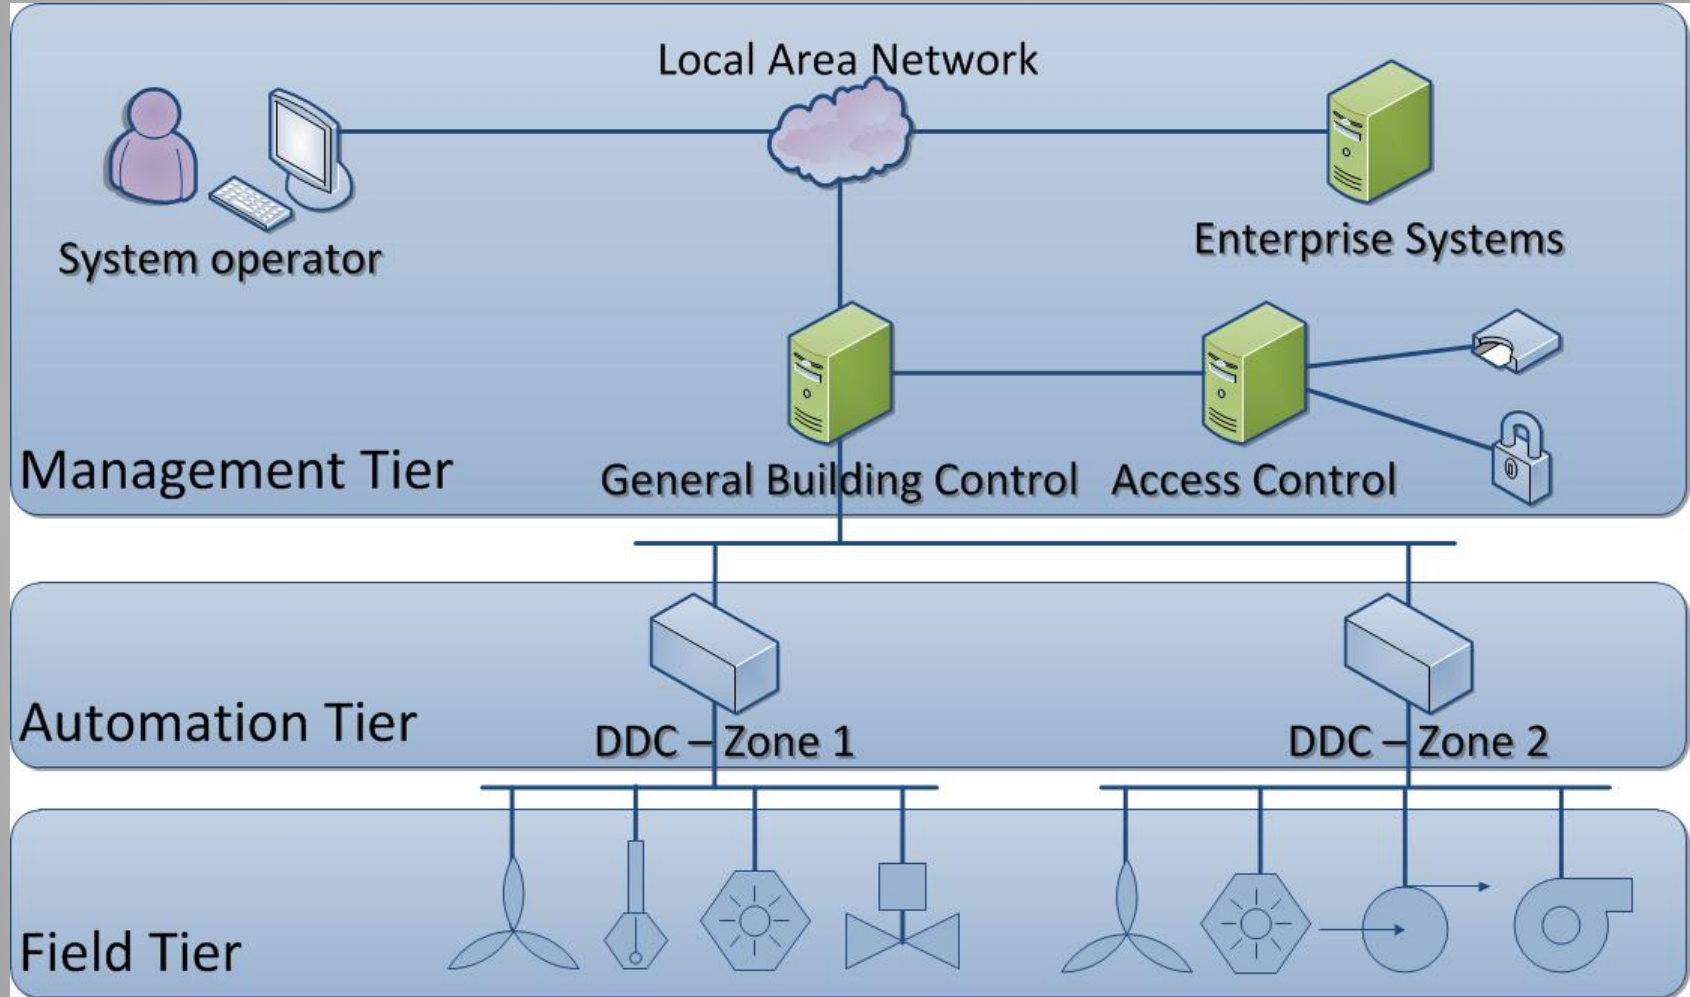

Now : Building automation layers & protocoles

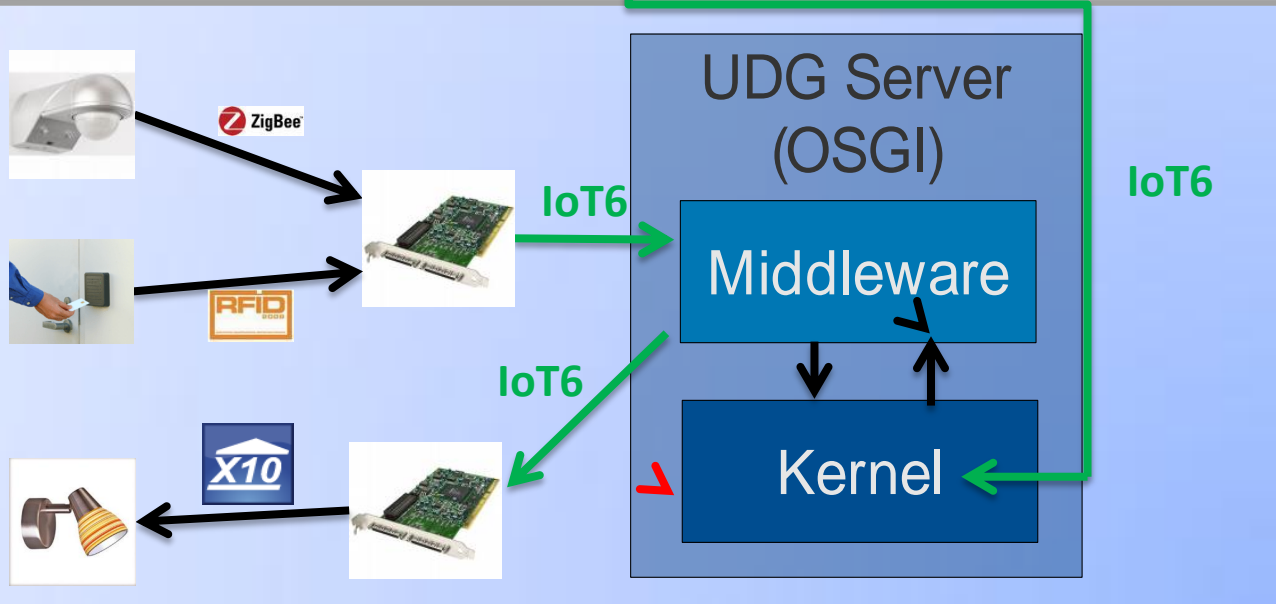

UDG Architecture(2007)

Building Automation : 3 tiers

UDG Architecture + IoT6

GUI room

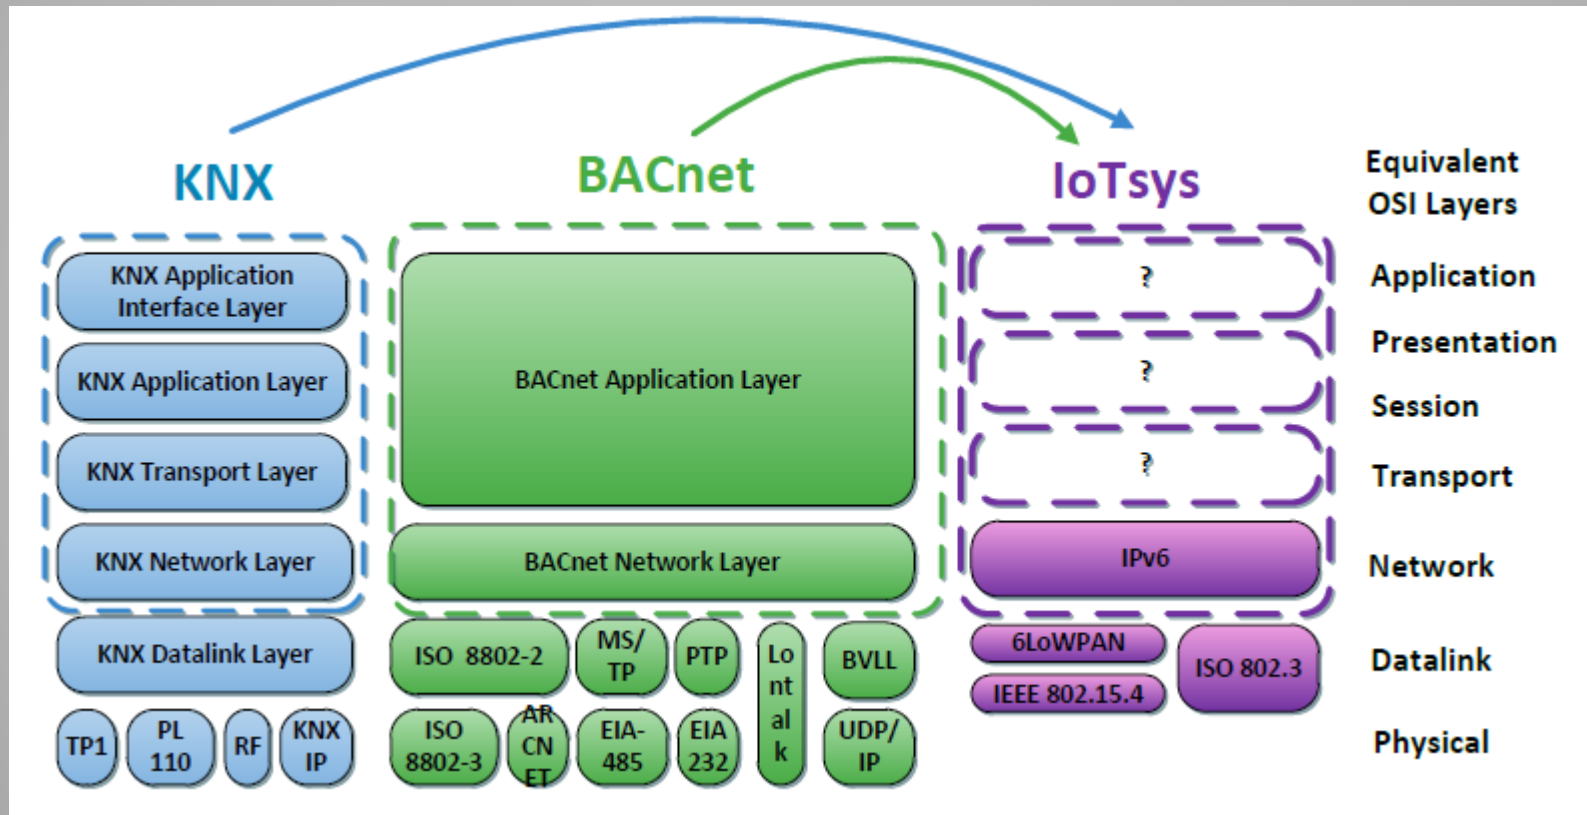

GUI mobile

SOA

IoT6 : New protocol : IPv6 based

Experimenting flexible and polyvalent integration of subsystems

A. Holistic control and monitoring system

able to interact with all the connected sub-systems.

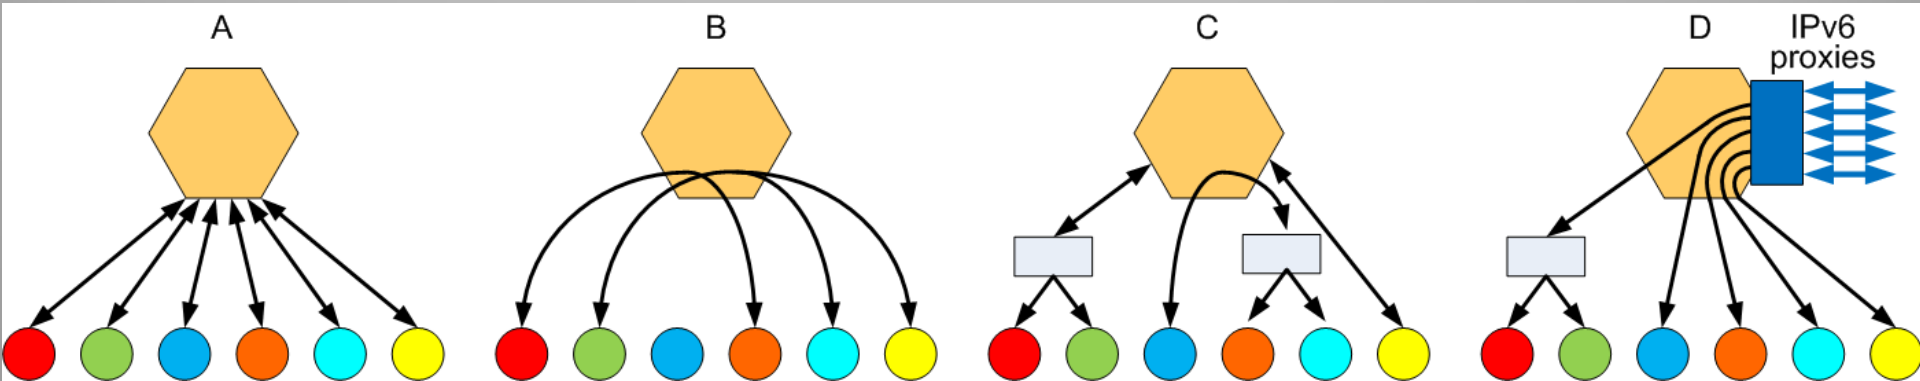

B. Protocol translator between different subsystems, enabling a device or a sub-system to interact with another device or sub-system using a different protocol.

C. Meta controller

complement to other control and monitoring systems; with the possibility to overview them and to enable interaction among them.

D. IPv6 proxy

for the underlying devices and sub-systems, enabling existing devices or sub-systems based on non-IP protocols to be easily integrated into an IPv6 framework. It paves the way to all sorts of new web-based applications.

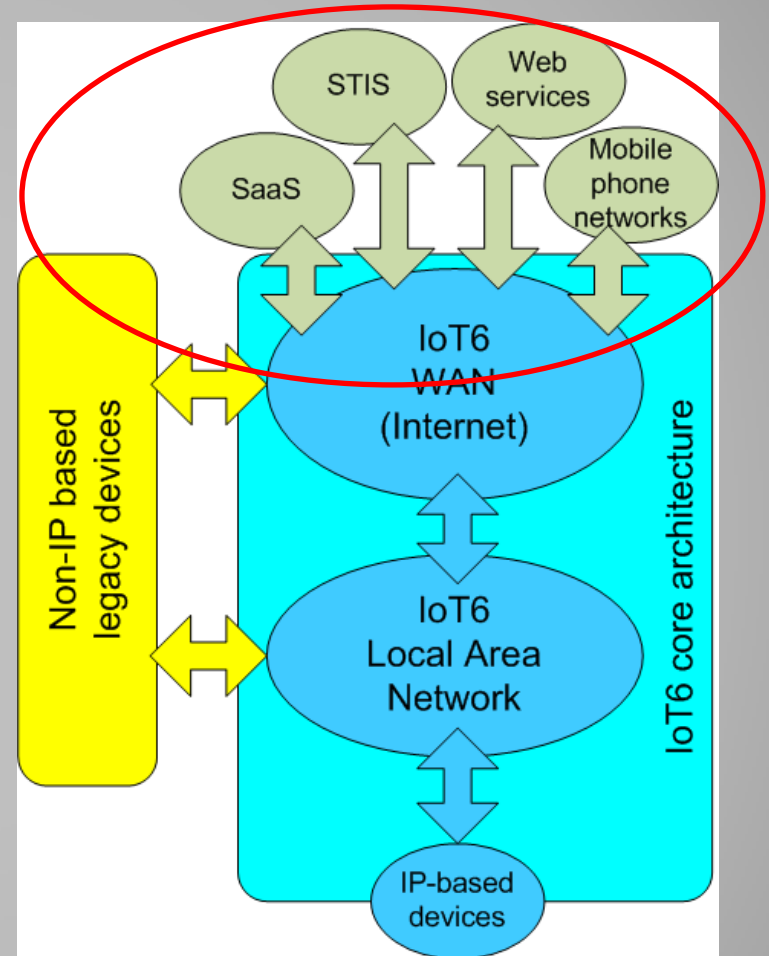

IoT6 : integrating legacy

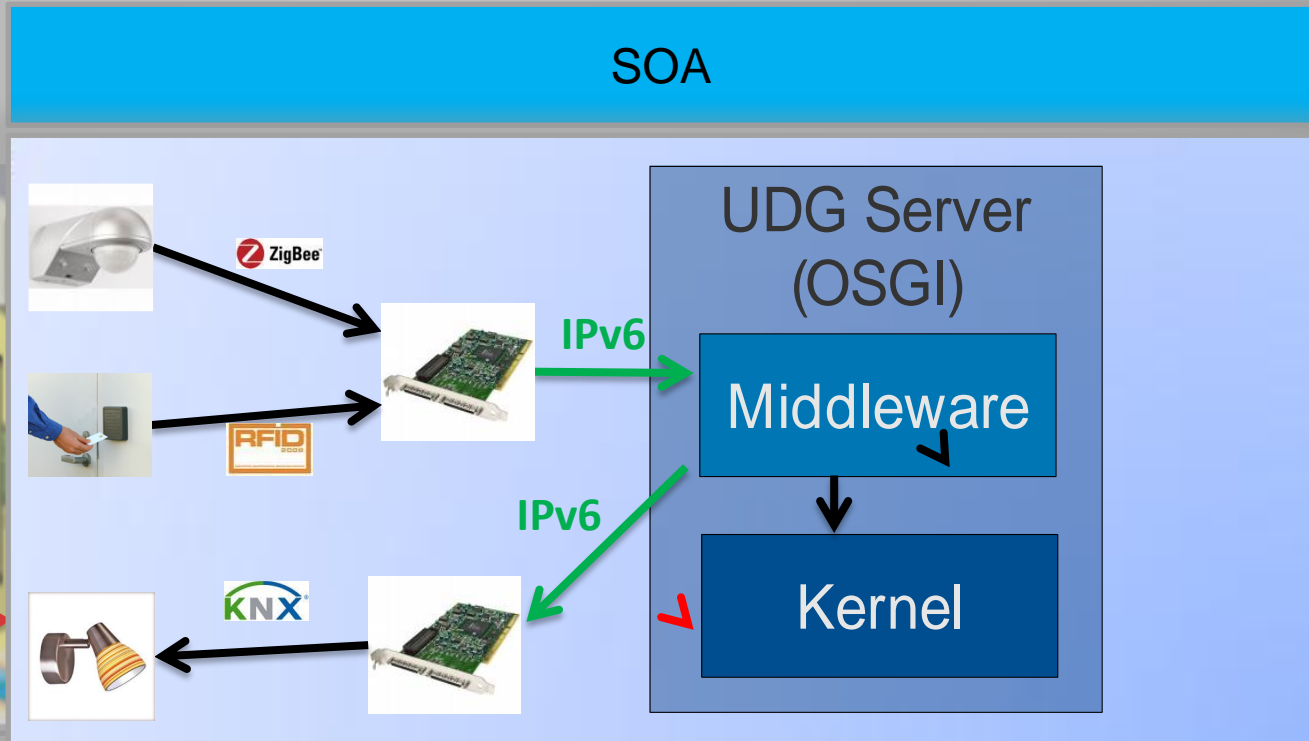

Service Oriented Architecture

Integration of **non-IP based devices** into the IoT6 architecture

and more generally into IPv6 and 6LoWPAN

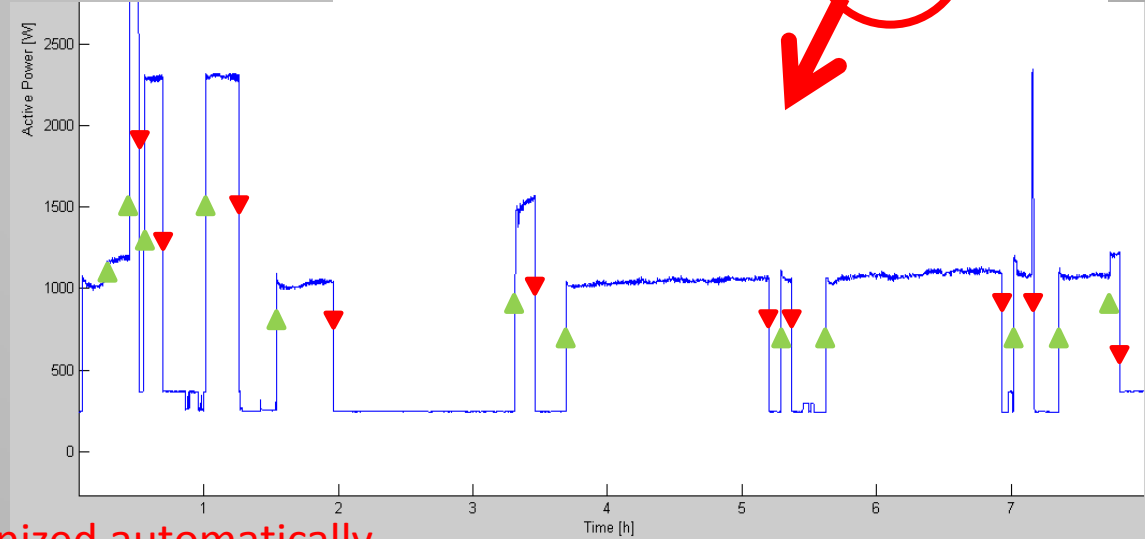

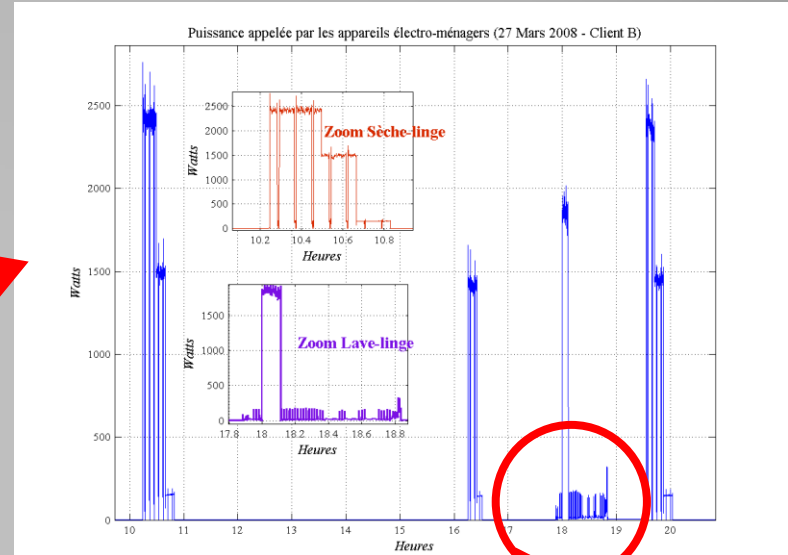

Use case: mixing UDG + Building Automation

Legacy device Helper:

Electrical device signature detection

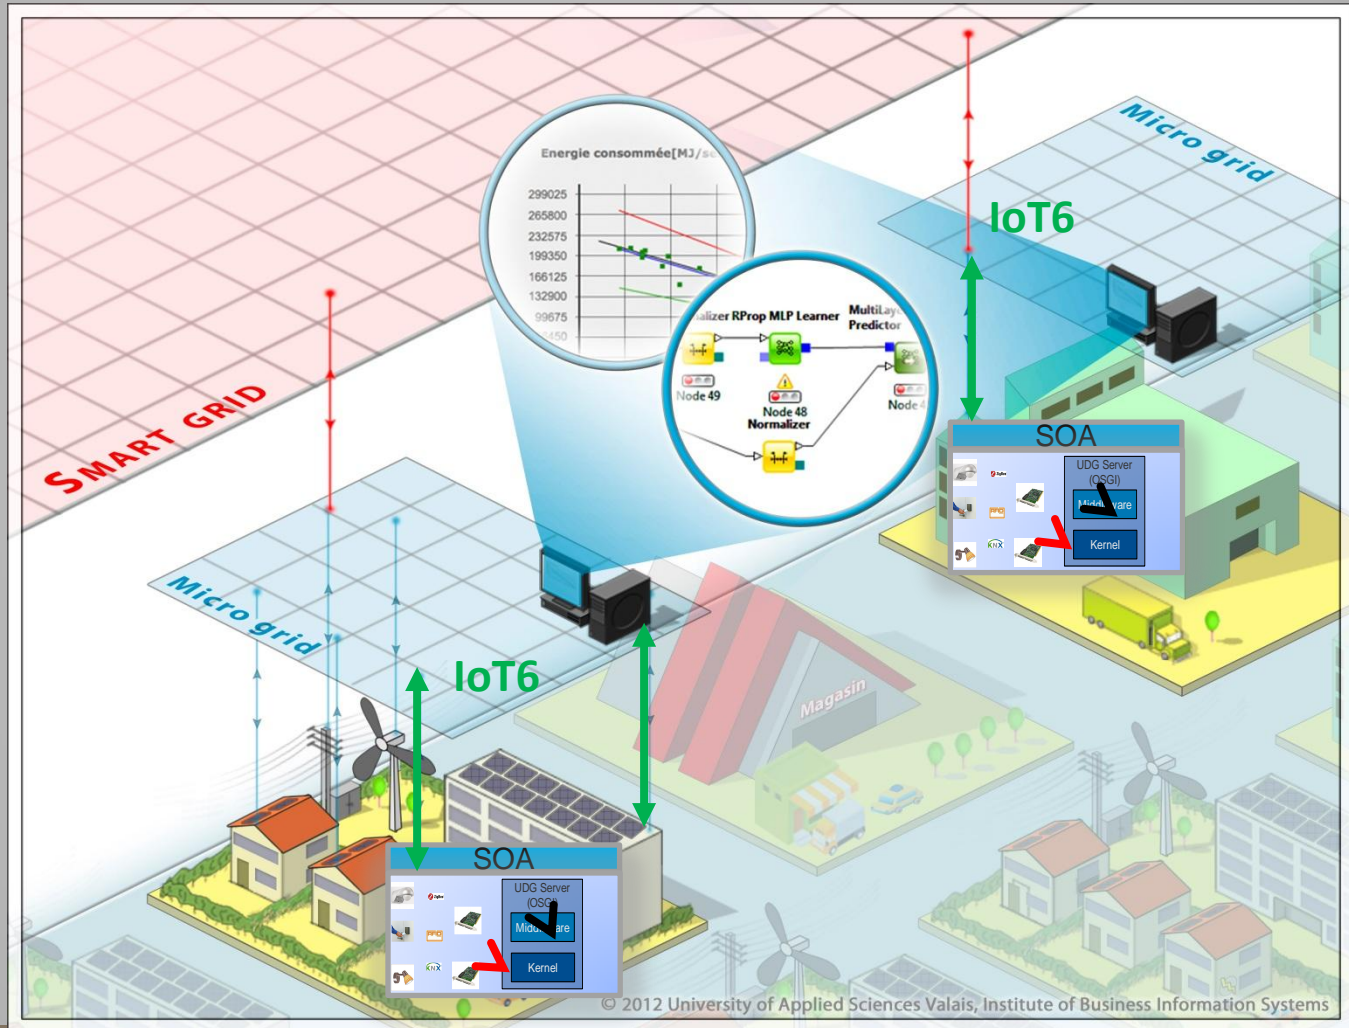

Link to old devices that will be recognized automatically

Use case :

Electric Smart-grid : a data driven micro-grid approach

IoT6 : taking advantage of IPv6

- One unified framework where all non ip devices can discuss inside an holisitic IPv6 network.
- Service oriented information system
- Legacy Device as a Service → LDaaS
- Partners for IoT6 integration :
 - VUT : Vienna University of Technology
 - Mandat international Geneva
